## **Retroreflective sensor**

# CE

## **Model Number**

## RL91-6-IR/49/59/115

Retroreflective sensor with 5 m fixed cable

#### **Features**

- Retroreflective sensor for single-• beam closing edge protection
- Narrow housing suitable for small ٠ gaps
- Sturdy plastic housing .
- Various possibilities for mounting •
- Version with infrared light .
- Version for supply voltage of up to 30 • V DC
- Dark on version

## **Product information**

Concentration on the essentials is the hallmark of the 91 series. As ac/dc supply devices, these economical, reliable and easy-to-use photoelectric sensors can be used almost universally. Their narrow design means that they can be used in any environment.

The single-beam photoelectric sensors of the 91 series are suitable for closing-edge monitoring for elevators, barriers and doors, as well as for object detection and object tracking in material handling systems.

#### **Electrical connection**

Technical data		
General specifications		
Effective detection range	0 6 m	
Reflector distance	0 6 m	
Threshold detection range	9 m	
Reference target	H85-2 reflector	
Light source	LED	
Light type	modulated infrared light	
Diameter of the light spot	approx. 230 mm at a distance of 600	0 mm
Angle of divergence	approx. 2.5 °	
Ambient light limit	90000 Lux	
Functional safety related parar	eters	
MTTF <sub>d</sub>	1083.4 a	
ndicators/operating means		
Function indicator	LED red, flashes when falling short of	of the stability control
Electrical specifications		
Operating voltage	U <sub>B</sub> 12 30 V DC	
No-load supply current	l <sub>0</sub> < 100 mA	
Dutput		
Switching type	dark on	
Signal output	1 NPN, 1 PNP synchronized-switchi reverse polarity protected	ng, short-circuit protected,
Switching voltage	max. 30 V DC	
Switching current	200 mA	
Switching frequency	f 25 Hz	
Response time	20 ms	
Ambient conditions		
Ambient temperature	-20 55 °C (-4 131 °F)	
Storage temperature	-20 75 °C (-4 167 °F)	
Mechanical specifications		
Degree of protection	IP65	
Connection	5 m fixed cable

#### **Operating principle**

The retroreflective sensor contains the transmitter and receiver in a single housing. The light from transmitter is beamed back from a reflector to the receiver. If an object interrupts the light beam the switching function is initiated.
