

# **Model Number**

# OQT400-R200-2EP-IO-0,3M-V31

Triangulation sensor (SbR) with fixed cable and 4-pin, M8 connector

### **Features**

- Medium design with versatile • mounting options
- Multi Pixel Technology (MPT) -٠ flexibility and adaptability
- Reduction of device variety several • switch points within one sensor
- Reliable detection of all surfaces, ٠ independent of color and structure
- Low sensitivity to target color
- IO-link interface for service and process data

### **Product information**

The optical sensors in the series are the first devices to offer an end-to-end solution in a medium-sized standard design-from the thru-beam sensor through to the measuring distance sensor. As a result of this design, the sensors are able to perform practically all standard automation tasks.

The entire series enables sensors to communicate via IO-Link.

The DuraBeam laser sensors are durable and can be used in the same way as a standard sensor.

Multi Pixel Technology (MPT) ensures that the standard sensors are flexible and

can be adapted to the application environment.

Technical data		
General specifications		
Detection range		40 400 mm
Detection range min.		40 100 mm
Detection range max.		40 400 mm
Adjustment range		100 400 mm
Reference target		standard white, 100 mm x 100 mm
Light source		LED
Light type		modulated visible red light
LED risk group labelling	()	exempt group
Black/White difference (6 %/90 %	(o)	< 5 %
Diameter of the light spot		approx. 15 mm at a distance of 400 mm
Angle of divergence		approx. 2.5 °
Ambient light limit		EN 60947-5-2 : 70000 Lux
Functional safety related param	neters	
MTTF <sub>d</sub>		600 a
Mission Time (T <sub>M</sub> )		20 a
Diagnostic Coverage (DC)		0 %
Indicators/operating means		
Operation indicator		LED green: constantly on - power on flashing (4Hz) - short circuit flashing with short break (1 Hz) - IO-Link mode
Function indicator		LED yellow: constantly on - switch output active constantly off - switch output inactive
Control elements		Teach-In key
Control elements		5-step rotary switch for operating modes selection
Electrical specifications		
Operating voltage	U <sub>B</sub>	10 30 V DC
Ripple	D	max. 10 %
No-load supply current	I <sub>0</sub>	< 25 mA at 24 V supply voltage
Protection class	Ū	III
Interface		
Interface type		IO-Link ( via C/Q = pin 4 )
Device profile		Identification and diagnosis Smart Sensor type 0
Transfer rate		COM 2 (38.4 kBaud)
IO-Link Revision		1.1
Min. cycle time		2.3 ms
Process data witdh		Process data input 2 Bit Process data output 2 Bit
SIO mode support		yes
Device ID		0x111801 (1120257)
Compatible master port type		A
Output		
Switching type		The default setting is: C/Q - Pin4: NPN normally open, PNP normally closed, I Q2 - Pin2: NPN normally open, PNP normally closed
Signal output Switching voltage		2 push-pull (4 in 1)outputs, short-circuit protected, rever polarity protected, overvoltage protected max. 30 V DC
Switching current		
Usage category		max. 100 mA , resistive load DC-12 and DC-13
Voltage drop	U <sub>d</sub>	≤ 1.5 V DC
Switching frequency	f d	217 Hz
Response time	•	2.3 ms
Conformity		2.0 110
Communication interface		IEC 61131-9
Product standard		EN 60947-5-2
Ambient conditions		
Ambient temperature		-40 60 °C (-40 140 °F) , fixed cable -20 60 °C (-4 140 °F) , movable cable not appropri
Storage temperature		conveyor chains -40 70 °C (-40 158 °F)
Mechanical specifications		
Housing width		15 mm
Housing width Housing height		50.6 mm
Housing depth		41.7 mm
Degree of protection		41.7 mm IP67 / IP69 / IP69K
Connection		fixed cable 300 mm with M8 x 1 male connector; 4-pin
Material		inter ouble oco mini with work i male connector, 4-pin
Housing		PC (Polycarbonate)
Optical face		PMMA

### Settings

#### Teach-In (TI)

Use the rotary switch for switching signal Q1 or Q2 to select the relevant switching threshold A and/or B to teach in.

· The yellow LEDs indicate the current state of the selected output.

To teach in a switching threshold, press and hold the "TI" button for approximately 1 s, until the yellow and green LEDs flash in phase. Teach-in starts when the "TI" button is released.

• Teach-in successful: the yellow and green LEDs flash alternately at 2.5 Hz.

Teach-in unsuccessful: the yellow and green LEDs quickly flash alternately at 8 Hz.

After an unsuccessful Teach-in, the sensor continues to operate with the previous valid setting after the relevant visual fault signal is issued.

Set switching mode: you can define different switching modes by teaching in the relevant distance data for switching thresholds A and B.

### 1. Single point mode:

Refer to "General Notes Relating to Pepperl+Fuchs Product Information" Pepperl+Fuchs Group

USA: +1 330 486 0001

Germany: +49 621 776 4411 fa-info@de.pepperl-fuchs.com

Singapore: +65 6779 9091 fa-info@sg.pepperl-fuchs.com

#### 2. Window mode:

Teach in switching thresholds: you can teach in or overwrite a taught-in switching threshold at any time. To do this, press the "TI" button again.

Reset a value: you can reset a taught-in value. To do this, press the "TI" button for > 4 s, until the yellow and green LEDs go out. The reset process itself starts when the "TI" button is released.

• Reset successful: the yellow and green LEDs flash alternately at 2.5 Hz.

#### **Resetting to Factory Settings**

To revert back to factory settings, press the "TI" button for > 10 s with the rotary switch set to position "O," until the yellow and green LEDs go out at the same time. The reset process itself starts when the "TI" button is released.

• Reset to factory settings successful: the yellow and green LEDs light up at the same time. The sensor then continues to operate with factory settings.

OQT

- Factory setting for switching signal Q1:
- Switching signal high active, BGS mode (background suppression)
  Factory setting for switching signal Q2:
- Switching signal high active, BGS mode (background suppression)

### Configuration via IO-Link interface

### Configuring different operating modes via the IO-Link interface

The devices are equipped with an IO-Link interface as standard for diagnostics and parameterization tasks to ensure optimum adjustment of the sensors to the relevant application. Four different operating modes can be set, among other features:

## Background suppression operating mode (one switch point):

• Detection of objects irrespective of type and color in a defined detection range. Objects in the background are suppressed.

			active d	letecti	ion ran	ge			
_					. ,				Background suppression

#### Background evaluation operating mode (one switch point):

active detection range

• Detection of objects irrespective of type and color against a defined background. Reliable detection of objects at close range (detection range >= 0 mm). The background serves as reference.

active detection range	
	Background evaluation
Single point mode operating mode (one switch point):	0

### Single point mode operating mode (one switch point):

- Detection of objects irrespective of type and color in a defined detection range. Objects in the background are suppressed.
- The switch point corresponds exactly to the set point.

## Window mode operating mode (two switch points):

- Detection of objects irrespective of type and color in a defined detection range. Reliable detection when object leaves the detection range.
- Window mode with two switch points.

Foreground suppression

active detection range

Background suppression

# Center window mode operating mode (one switch point):

• Detection of objects irrespective of type and color in a defined detection range. Sets a defined window around a given object. Objects outside this window are not detected.

• Window mode with one switch point.

Foreground suppression

Background suppression

# Two point mode operating mode (hysteresis operating mode):

• Detection of objects irrespective of type and color between a defined switch-on and switch-off point.
