Model Number

CE

OMD8000-R2100-R2-2V15

2-D LiDAR Sensor with two M12 x 1 connectors

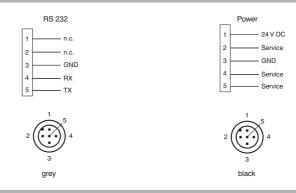

Features

- Measuring method PRT (Pulse • Ranging Technology)
- Distance measurement using object
- Two-dimensional measurement with • no moving parts
- Measurement using eye-safe LED technology
- 88° scanning angle

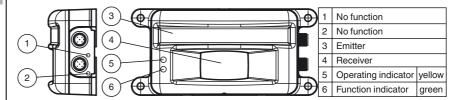

Product information

The new 2-dimensional multi-ray LED scanner uses tried-and-tested Pulse Ranging Technology and boasts a wide range of userfriendly features. The eye-safe LED technology in the sensor allows it to be used by personnel in all working areas without posing a danger. The 11 emitter elements arranged side by side span a scanning range of 88 degrees, while the emitter LEDs set themselves apart through their large light spot. Measuring on a surface rather than on a point makes it easier to measure inhomogeneous surfaces. A further highlight is the absence of any moving parts such as a motor or bearings, which makes the device less complex in its design and more resistant to mechanical stress.
